1) Get Gemini API (Refer youtube)

2) (How to use that API to input a simple msg & get respond through JS function, a simple API call)

3) Build application with prompt engineering to match the Requirements

following

you won't touch it
gemini provides this server

Server
Gemini input
Output:
here The following products are available

Angular application
API call
http://gemini | method = post
{ "input": "you are a customer supporter, now, respond for " what are the products available" }

Show it in UI

It can be done by fetch() method, (use chatGPT to do this for implementation)

Now add features

1, Sentiment Analysis,

before fetch(), the user input
should be analyzed for happy, sad,
angry mood, then alter the
prompt using condition, eg

if (Sentiment-Analyzed(input) == "happy") {

prompt += "Note, the customer is happy
about your prev response, so
engage with similar manner" }

else if (angry)

prompt += "The customer is angry,
about your previous response,
so respond accordingly etc,)

etc; for other moods
